Core workflows & SOPs

The day-to-day procedures — intake, booking, proposals, deposits, materials, completion — each with the acceptance bar that says it's actually working.

IRONWRAP EXTERIORS • REV. JUNE 2026

Workflow 1 — Lead intake

Goal. Every lead lands in one queue, gets deduped, and comes out with a next action.

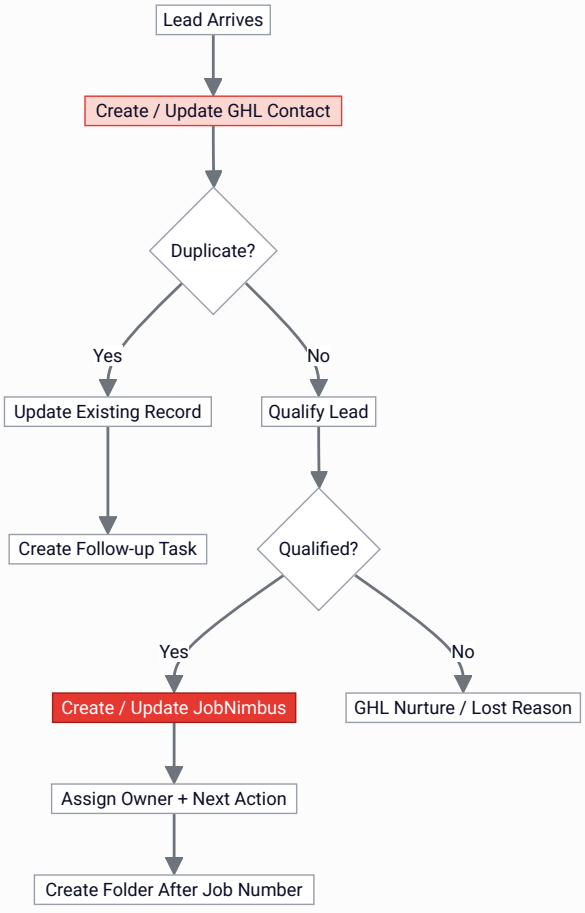

FIGURE 1 — LEAD INTAKE, ARRIVAL TO FOLDER

1. Lead lands in GHL.
2. Dedupe by phone, email, and address.
3. Capture source, service interest, urgency, property, and notes.
4. If qualified, create or update the JobNimbus contact / job.
5. Assign an owner.
6. Create the next action.
7. Create the folder only after the JobNimbus job number exists.

ACCEPTANCE

- A duplicate phone number does not create a duplicate job.
- Every new lead has an owner or a queue.
- Every lead has a next action or a lost reason.

Workflow 1B — Website & front-door intake

Goal. Website, Google Business Profile, form, and phone leads enter GHL with their source and intent intact, then route to the right queue.

SOP

1. A website, GBP, form, or phone lead enters GHL.
2. Preserve source URL, landing page, page type, UTM / call source, service intent, city, attachment, and message.
3. Send the customer a confirmation.
4. Assign an owner / queue.
5. Trigger human or Phone AI follow-up when intent is high and the lead hasn't booked.
6. Dedupe by phone, email, and normalized address.
7. Create or update JobNimbus only after qualification.
8. Create the Google job folder only after the JobNimbus job number exists.

> **QUALIFICATION RULE**
>
> A qualified lead has a phone, a service intent, a serviceable area, an address or enough property detail, and is not an obvious duplicate.

ROUTE BY INTENT

INTENT	DESTINATION
Metal roofing	Residential sales queue

INTENT	DESTINATION
Siding / cladding	Residential sales queue
Gutters	Residential or light-exterior queue
Soffit / fascia	Residential or light-exterior queue
Commercial	Commercial / Ilya queue
Shop / supply	Shop / supply queue
Warranty / complaint	Human escalation
Insurance / hail	Approved script + sales queue
Not sure	Human qualification task

ACCEPTANCE

- Source URL, page type, service intent, UTM / source data, and call source are preserved when available.
- A duplicate website lead does not create a duplicate job or folder.
- Every lead leaves with an owner / queue and a next action.

Workflow 2 — Appointment booking

Goal. Website, staff, and AI all book into the same calendar path.

SOP

1. Use the GHL calendar as the primary booking system.
2. Service type determines the appointment type.
3. Calendar confirmation goes to the customer.
4. A JobNimbus task / event mirrors the booking where needed.
5. Reschedule or cancel updates both GHL and JobNimbus.

ACCEPTANCE

- The customer receives a confirmation.
- Staff sees the appointment.
- JobNimbus shows the next task.
- No double-booking from separate calendars.

Workflow 3 — Estimate & proposal

Goal. Produce a clear customer-facing proposal package — and archive it.

SOP

1. Attach measurements and photos to the job.
2. Extract measurement data, or flag it for review.
3. A human reviews quantities and pricing inputs.
4. Build the proposal version.
5. Send the customer a URL.
6. Export the PDF to the job folder.
7. Update the JobNimbus proposal status.
8. Start the follow-up sequence.

ACCEPTANCE

- The proposal opens on mobile.
- The PDF is archived.
- Proposal status is visible in JobNimbus.
- It can embed or link Renoworks only if Renoworks is approved.
- Follow-up stops when the customer accepts, declines, or complains.

Workflow 3B — Hail / insurance sales handling

Goal. Support the hail and insurance sales motion without letting staff or AI make unsafe claims.

SOP

1. Capture hail / insurance interest as a structured flag.
2. Use only owner-approved wording for insurance, Class 4, financing, and upgrade conversations.
3. Route coverage, claim, legal, warranty, and dispute questions to a human.
4. If FinanceIT is offered, use only approved dealer economics and customer-facing wording.
5. Store insurance-sensitive notes with limited access.

ACCEPTANCE

- AI and staff scripts never promise insurance approval, premium discounts, legal outcomes, or warranty decisions.
- Hail / insurance lead source and follow-up status are visible.
- Financing interest is captured without storing finance documents in AI or broad CRM notes.

Workflow 4 — Deposit & payment

Goal. QuickBooks owns finance truth while operations still see status.

SOP

1. Proposal accepted.
2. JobNimbus marks it signed / accepted.
3. Staff or an approved automation prepares the deposit request in QuickBooks.
4. QuickBooks payment status mirrors back to JobNimbus status fields.
5. A missing deposit creates a follow-up.

ACCEPTANCE

- No automatic invoice from unreviewed CRM state.
- Payment status is visible in JobNimbus.
- Finance data is never copied into AI prompts or transcripts.

Workflow 5 — Materials

Goal. Material requests become visible production work instead of informal text messages.

SOP

1. A signed / deposit-ready job triggers a material request.
2. Staff completes the material-request form / task.
3. Attach product, color, profile, measurements, and supplier notes.
4. Office or shop reviews it.
5. Mark it ready for scheduling, or blocked.

ACCEPTANCE

- The installer doesn't text material lists as the source of truth.
- Blockers are visible before scheduling.
- Paradigm stays deferred until this manual flow is stable.

MATERIAL-LIST DECISION

- The first deliverable uses one material-request task / form attached to the JobNimbus job.
- The owner can later approve one multi-scope list, or separate roof/siding/gutter/soffit/fascia lists, after field testing.
- NaturalForms is the first-deliverable mobile form layer, because IronWrap already has it.

Workflow 5B — Forms & documents library

Goal. Every recurring field, office, and customer document has a known owner, a storage location, and a defined effect on status.

#	FORM / DOCUMENT	TASK 1 OWNER	TASK 1 SYSTEM
1	Work order	Office / production	NaturalForms + JobNimbus task / status
2	Additional work order / change order	Sales / office	NaturalForms + JobNimbus note / task
3	Equipment & machinery request	Office / shop	NaturalForms + JobNimbus task
4	Completion form	Field / office	NaturalForms + JobNimbus completion status
5	Inspection form	Field / office	NaturalForms + JobNimbus review task
6	Materials request	Sales / production	NaturalForms + JobNimbus material status
7	Safety form	Field	NaturalForms
8	Contract	Sales / office	NaturalForms eSignature or approved JobNimbus signing path
9	Invoice	Office / accounting	QuickBooks
10	Receipt	Office / accounting	QuickBooks
11	Material list	Sales / production	NaturalForms attachment / form; Paradigm after approval
12	Proposal	Sales	NaturalForms / HTML / PDF proposal first

ACCEPTANCE

- Each document type has a template or a deliberate deferral.
- Each document type has a storage location.
- Any document that changes job, payment, or production status has a human reviewer.

Workflow 6 — Completion, invoice, review

Goal. Completed jobs move through invoice, closeout, and an eligible review follow-up.

SOP

1. Field marks completion.
2. Completion form and photos attached.
3. Office reviews any open issues.
4. QuickBooks issues the final invoice.
5. Payment status updates.
6. If no complaint or dispute exists, the GHL review request starts.
7. If a complaint or dispute exists, create a human task instead of a review request.

ACCEPTANCE

- A completed job can't disappear without an invoice / review path.
- Complaints and disputes route to a human.
- Review requests stop if a dispute exists.

Daily owner SOP

Every morning, the owner reviews:

- New unassigned leads.
- Leads not contacted.
- Missed calls.
- Appointments today and tomorrow.
- Stale jobs by stage.
- Pending proposals.
- Missing deposits.
- Material blockers.
- Completed not invoiced.
- Overdue invoices.
- Failed automations.

DONE WHEN

Each exception has an owner and a next action.
