Phone AI automation layer

Where AI answers the phone, what it's allowed to do, and the evaluations it has to pass before it ever talks to a customer in production.

IRONWRAP EXTERIORS • REV. JUNE 2026

Final AI decision

Phone AI is a phone-automation layer — not just a missed-call bot. Its scope runs across inbound calls, missed calls, after-hours coverage, lead qualification, booking, CRM updates, call summaries, tasks, follow-up triggers, escalation, and follow-up on high-intent website leads that asked for contact but didn't book — all within the approved pilot scope.

ROLL OUT IN PHASES

1. Start with missed-call recovery and after-hours calls.
2. Expand to selected inbound calls only after pilot calls pass review.
3. Keep human live-answer for business-hour calls until Ilya approves the production behavior.

Humans stay in the loop for exceptions, disputes, sensitive decisions, and any case where AI could create sales or liability risk.

Provider order

1. GHL Voice AI / AI Employee.
2. Vapi, if GHL fails tool calls, webhooks, booking, or logs.
3. ElevenLabs, if GHL / Vapi work operationally but voice quality is the blocker.
4. Retell / Bland / Telnyx, as benchmarks only.
5. Twilio + OpenAI Realtime or LiveKit, only if managed platforms fail a specific requirement.

AI call flow

Every call discloses AI and recording, classifies intent, then routes to qualify-and-book, lookup, escalation, or a queue — and always ends in a written summary.

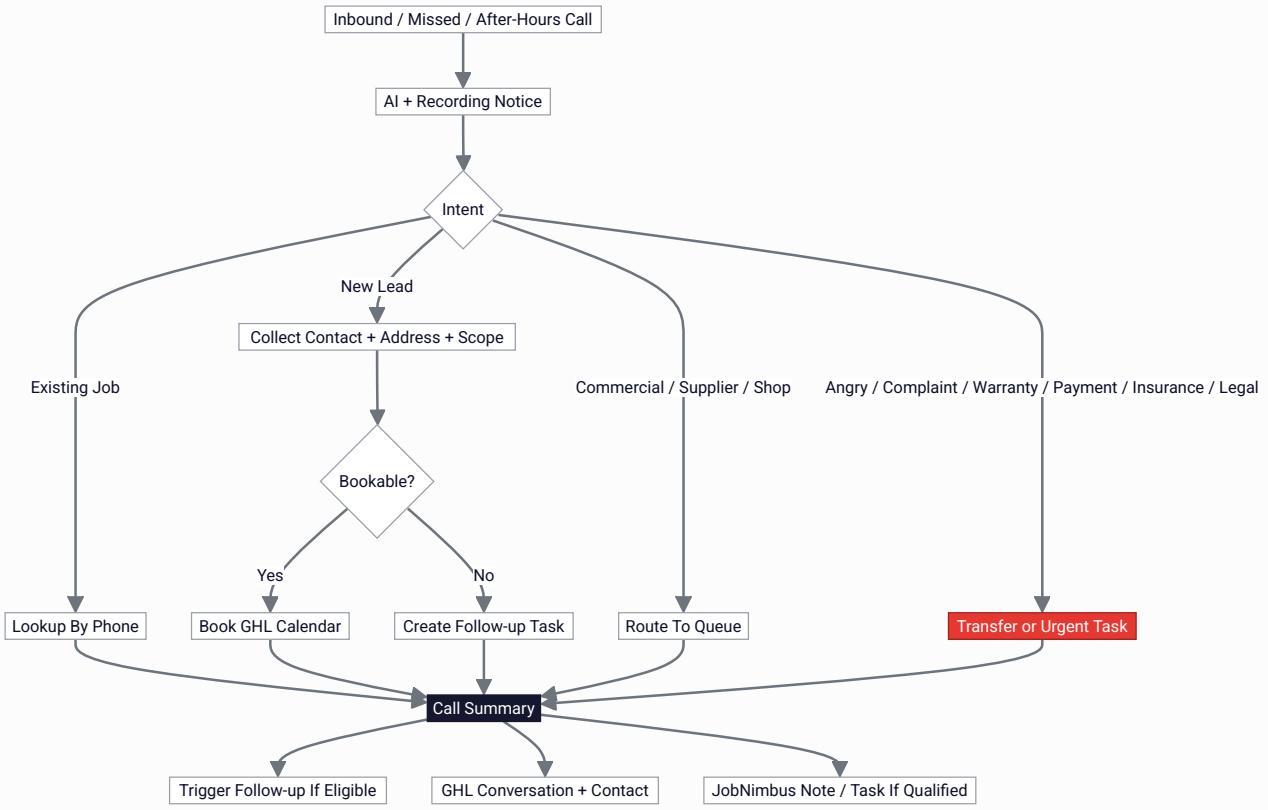

FIGURE 1 — INBOUND / MISSED / AFTER-HOURS CALL FLOW

Required capabilities

The agent must:

- Disclose AI assistance and recording / transcription when active.
- Capture name, phone, email if available, address, service interest, and urgency.
- Classify lead type — roof, siding, gutter, soffit, fascia, commercial, supply/shop, warranty, emergency.
- Classify operating division — residential, commercial, shop/supply, or steel/distribution.
- Ask hail / insurance questions only from approved wording.
- Answer approved FAQ from the knowledge base.
- Create or update the GHL contact / opportunity.
- Update a JobNimbus task / note when the lead is qualified or already tied to a job.
- Create a clear next step after every call.
- Trigger the right follow-up sequence after the call when eligible.
- Follow up on a high-intent website lead that requested contact but didn't book, within the approved pilot scope.
- Escalate urgent, angry, legal, warranty, payment, insurance, low-confidence, and human-request calls.
- Send an SMS confirmation after booking.

- Book an appointment into the GHL calendar.
- Write a short summary staff can read without the full recording.

Tool calls

Tool handlers needed once a provider is chosen:

- `lookup_contact_by_phone`
- `create_or_update_contact`
- `create_or_update_lead`
- `get_available_appointment_slots`
- `book_appointment`
- `create_jobnimbus_task`
- `create_jobnimbus_note`
- `send_sms_confirmation`
- `trigger_follow_up_sequence`
- `transfer_to_human`
- `log_call_summary`

Guardrails

THE AI MUST NOT

- Quote final prices.
- Promise schedules outside available calendar slots.
- Make warranty determinations.
- Make legal or insurance determinations.
- Promise financing approval or outcomes.
- Discuss payment disputes beyond routing to a human.
- Store credit card, banking, PAD, or financing data.
- Continue marketing communication after opt-out.
- Hide that it is AI when notice is required or policy demands disclosure.

Knowledge base

Approve before launch:

- Company identity.
- Service area.
- Services.
- Hail / insurance wording.
- Financing / deposit wording.
- Office hours.
- Escalation contacts.

- Division routing — residential, commercial, shop/supply, steel/distribution.
- Appointment rules.
- What not to answer.

Evaluation call scripts

Run these before production:

1. New homeowner asking for a metal-roof estimate.
2. Hail / insurance lead.
3. Siding lead.
4. Gutter-only lead.
5. Commercial lead.
6. Shop / supply inquiry.
7. Steel / slitting / cutting inquiry.
8. Existing customer asking for job status.
9. Angry / complaint escalation call.
10. Missed-call recovery.
11. Duplicate lead with the same phone number.
12. Caller refuses email.
13. Caller asks for a human.
14. Call qualifies for post-call follow-up.

Pass criteria

PILOT PASSES ONLY WHEN

- Booking works.
- Transfer works.
- The summary is useful.
- CRM updates are correct.
- A duplicate lead is not created.
- The customer receives a confirmation.
- Eligible post-call follow-up triggers correctly.
- A failed call creates a human task.
- Recording / transcript access is limited.
- Ilya approves the production call behavior.
