Source verification notes

The source checks behind this pack — compliance references and vendor pricing, with the result of each. Pricing and features move, so re-check before purchase or production contracting.

IRONWRAP EXTERIORS • CHECKED 27 JUNE 2026

Compliance sources

SOURCE	URL	RESULT
OPC Canada — PIPEDA principles	priv.gc.ca — PIPEDA principles	HTTP 200
Alberta PIPA	alberta.ca/personal-information-protection-act	HTTP 200
CRTC — CASL guide	crtc.gc.ca/eng/com500/guide.htm	HTTP 200
National DNCL	lnnte-dncl.gc.ca/en	HTTP 200

COMPLIANCE INTERPRETATION

- The build is compliant-by-design, not lawyer-certified.
- Production launch is blocked until consent, AI / call-recording notice, unsubscribe handling, DNCL / internal DNC, vendor register, retention, breach response, and access hardening are all approved.

Website & front-door verification

SITE CHECK · 27 JUNE 2026

- IronWrap site checked on 27 June 2026 at ironwrapexteriors.com — the sitemap lists 75 URLs.
- Existing pages include home, services, quote, contact, individual service pages, city / neighborhood metal-roofing pages, comparison pages, and blog posts.
- The home form captures name, email, phone, city, service, message, and file upload; the quote and contact forms add first / last name, full address, province, and postal code.
- Service pages such as metal roofing, siding / cladding, gutters, and commercial carry service-specific forms.
- Website forms exist and should be mapped into GHL with source, page type, and service fields.
- Raw HTML did not prove GHL / LeadConnector tracking — verify form-to-GHL routing in the actual account / browser.
- Home-service funnel references support a strong quote CTA, short qualification, proof, and fast booking / follow-up.

Local assumptions carried from v9.1 notes

Use these only as planning numbers until vendor quotes are confirmed:

- Renoworks — CAD $8,000 setup + USD $3,200/year.
- Paradigm — CAD $10,800 setup + CAD ~$673/month.
- NaturalForms — CAD ~$21/user/month.
- RoofRuler — CAD ~$40/report.
- Google Workspace — CAD ~$60/month for 3 users.
- AI receptionist — CAD ~$100/month plus ~$300 setup (v9.1 planning).
- Moneris — transaction-fee based; low fixed Interac debit, percentage credit-card fees.
- FinanceIT — dealer / program economics vary; treat as approval-gated.
- WooCommerce / hosting — CAD ~$35/month planning note, deferred from Task 1.

NaturalForms verification

NaturalForms is part of the first deliverable because IronWrap already has a subscription.

VERIFIED PUBLIC DETAILS

- Positioned around smart forms, eSignatures, workflow automation, photo / sketch capture, offline mobility, Smart PDF transform, workflow logic, connectors, webhooks, and a REST API.
- Lists JobNimbus as an integration for syncing roofing jobs and form data.
- The JobNimbus partner page describes prefilled job / customer data, completed / signed document uploads to job folders, and photo / sketch sync.
- Pricing tiers: Essentials, Advanced, Grow. Advanced includes unlimited integrations; Grow lists full API access.

- Web Apps output settings support QuickBooks, Google Sheets, JobNimbus, and Generic Web Apps connectors, with document-data mapping and PDF / CSV / JSON / XML data-file links via webhook output.
- REST API page shows completed-document querying, CRUD for users / documents / templates, OAuth 2.0 / API-key auth, and bulk extraction.

IMPLEMENTATION INTERPRETATION

- Use NaturalForms in the first deliverable for field forms, signatures, photos, sketches, and output routing.
- Prefer the NaturalForms JobNimbus integration and Web Apps / generic webhook output to Make first.
- Use the REST API only if the current account includes API access, or webhook / native integration can't support delivery.
- Don't create QuickBooks invoices directly from NaturalForms in Task 1 — keep office review, and QuickBooks as finance truth.

v9.1 details audited into the final pack

- The repo PDFs are treated as real RoofRuler reports delivered automatically by email.
- The 18% close-rate and lost-lead risk are business context, not guaranteed current performance.
- The 60-reports/month assumption is expansion / volume proof, not Task 1 budget truth.
- All 12 recurring forms / documents from v9.1 appear in the workflow library.
- The payment stack includes cash / cheque / direct deposit, Interac, Moneris, credit card, and FinanceIT validation gates.
- Renoworks is optional lead-intent and proposal visualization, with setup, mapping, and privacy checks.
- Paradigm is a deferred shop / material bridge, including rollformer / import checks.
- WooCommerce / B2C store and Calgary expansion are explicitly deferred unless the owner adds them.
- The separate sellable metal-layout SaaS idea is excluded — Task 1 is the current scope.

Final pricing position

Present the existing-subscription first deliverable first:

- CAD $0 new-vendor setup target.
- CAD $0–$150/month incremental target — limited to approved usage like SMS, storage overage, or report usage not already covered.
- CAD $1,100–$2,500/month remains the all-in planning run-rate if the existing subscriptions are re-priced from zero.

Treat the larger CAD $4,200–$5,800/month scenario as expansion after volume proof — not Task 1.
