Integrations & automations

Every connection between systems — what it touches, which way data flows, and the rules that keep automations from fighting each other or failing silently.

IRONWRAP EXTERIORS • REV. JUNE 2026

Automation principles

NON-NEGOTIABLE RULES

- One owner per automation.
- One trigger per automation.
- One source of truth per data area.
- Every mutation carries an idempotency key.
- Every failure raises an alert or a task.
- Every automation has a kill switch.
- No broad two-way sync unless it's genuinely required.

Integration matrix

SYSTEM	NEEDED SURFACE	DIRECTION	PRIORITY
GHL / LeadConnector	Contacts, opportunities, conversations, workflows, calendars, webhooks, attribution, number pools, website forms, Phone AI / Voice AI	In / out	P0
Google Business Profile	Profile fields, source label, review link, optional booking link	Manual / config	P1
JobNimbus	Contacts, jobs, tasks, notes, attachments, boards/statuses, API keys, automations	In / out	P0
Make	Scenario triggers, webhooks, error handling, schedules, data stores	In / out	P0

SYSTEM	NEEDED SURFACE	DIRECTION	PRIORITY
Storage	Folder create / rename, upload, permission links	Out	P0
Email / Google mailbox	RoofRuler report emails, sender filters, PDF attachments, message IDs	In	P0
NaturalForms	Templates, completed documents, signatures, photos, sketches, output settings, JobNimbus sync, webhooks/API if included	In / out	P0
QuickBooks	Customers, invoice status, payment status, products/services	Mostly out / status back	P1
OCR / parser	File input, extracted blocks/tables, confidence	In	P1
Proposal generator	Job data in, HTML/PDF out, sent/accepted state	In / out	P1
AI provider	Calls, transcripts, summaries, tool calls, transfers	In / out	P1
Renoworks	Lead, uploaded photo/model, roof/wall/product/color interest, visualizer link, engagement stats if exportable	In	Deferred
Paradigm	Material/production order import/API, rollformer model mapping, shop status	Out / in	Deferred
Moneris	Interac debit and credit-card processing status only	Status back	Approval req.
FinanceIT	Financing application / status reference only	Status back	Approval req.

Core automations

AUTOMATION	TRIGGER	ACTION	FAILURE HANDLING
New GHL lead → JobNimbus	GHL lead created / qualified	Dedupe, create/update contact & job, assign owner	Admin alert + manual task
Source attribution captured	Website form, tracked call, GBP, or campaign lead	Store landing page, source URL, UTM, call source, and first-response metrics	Admin alert if required source fields are missing
Qualified job → folder	Job qualified and job number exists	Create folder once, store links	Admin alert; no retry without idempotency

AUTOMATION	TRIGGER	ACTION	FAILURE HANDLING
Appointment booked	GHL appointment booked	Create/update JobNimbus task / event	Alert if job not found
Missed-call summary	AI call completed	Store summary, task, booking status	Human follow-up task
RoofRuler report email	RoofRuler email with PDF received	Match job/address, archive PDF, parse or flag	Review task + unmatched-report queue
Measurement uploaded	File attached / uploaded	Parse/extract or flag review	Review-needed task
NaturalForms completed	Form completed / submitted	Archive output, update JobNimbus, log event	Admin alert + manual archive task
Proposal sent	Proposal generated / sent	Update status, archive PDF, start follow-up	Sales task
Proposal accepted	Customer accepts / signs	Update status, start deposit workflow	Office task
Deposit paid	QuickBooks / payment event	Update JobNimbus deposit status	Finance task
Material request	Deposit / signed status	Create material-request task	Production task
Materials ready	Staff marks ready	Move to ready-to-schedule	Scheduling task
Completion form	Field completion	Create invoice / review path	Office task
Invoice paid	QuickBooks paid	Close / archive status	Finance task
Review request	Completion + no issue	Send approved Google review link with source label	Stop on complaint / opt-out
Automation failed	Make / relay failure	Notify owner	Must include run link + recovery step

Webhook relay decision

Use Make first. Add a small relay only if Make can't reliably handle:

- Dedupe.
- Idempotent folder creation.
- Detailed mutation logs.
- Retried webhook delivery.

- Field validation.
- Health checks.

RELAY RESPONSIBILITIES, IF BUILT

- Validate incoming payloads.
- Normalize fields.
- Create the idempotency key.
- Store an event log.
- Call the target system.
- Return success / failure.
- Emit an alert on failure.

> *The relay must never become a CRM replacement.*

Logging standard

Every critical automation log should record:

- Timestamp.
- Automation name.
- Trigger event.
- Source record IDs.
- Target record IDs.
- Job number, if known.
- Action taken.
- Result.
- Error message, if failed.
- Manual recovery owner.

Kill-switch standard

Every automation documents:

- Where to disable it.
- Who can disable it.
- What breaks when it's disabled.
- The manual workaround.
- How to restart it safely.

Duplicate prevention

Run these checks before creating any record:

1. Exact phone match.
2. Exact email match.

3. Normalized address match.
4. JobNimbus external refs.
5. GHL external refs.

When any of them is uncertain, flag the record for human merge review.

NaturalForms integration

Use NaturalForms now — it's already subscribed.

INTEGRATION ORDER

1. Native JobNimbus integration for job/form data sync, if the mapping is reliable.
2. NaturalForms Web Apps or generic webhooks to Make for completed-form events.
3. NaturalForms output files or structured exports to Google storage.
4. REST API only if the current account includes it, or webhooks can't meet the delivery requirement.

FIRST FORMS TO IMPLEMENT

- Work order.
- Additional work order / change order.
- Equipment & machinery request.
- Completion form.
- Inspection form.
- Materials request.
- Safety form.
- Contract / customer acceptance, if approved.
- Material list.

RULES

- NaturalForms owns completed-form evidence.
- JobNimbus owns job status and next action.
- Google storage owns the archived PDF / output copy.
- QuickBooks invoices and receipts stay reviewed accounting actions.
- Don't upgrade for the REST API until the webhook and native-connector paths are tested.

Supplier / shop bridge

FIRST DELIVERABLE

- Material requests live in JobNimbus as tasks / forms and attachments.
- Supplier, product/profile, color, quantity, required date, and blocker fields are structured.
- JobNimbus supplier connectors can be reviewed, but aren't production-ready until one test order proves the data is correct.

- Shop/supply and steel/distribution inquiries route separately from residential install jobs.

DEFERRED PARADIGM BRIDGE

- Send approved material / production orders only after human review.
- Map IronWrap product/profile names to Paradigm item names.
- Confirm rollformer model / profile compatibility before production use.
- Pull back shop status only — received, in production, ready, blocked, complete.
- Never let Paradigm become the source of truth for customer / job stage.
