Documents, measurements & proposals

How measurement reports come in, get extracted or flagged, and turn into a customer-ready proposal — with a human checking the numbers before any price is real.

IRONWRAP EXTERIORS • REV. JUNE 2026

Measurement intake decision

Lead with deterministic extraction, and fall back to OCR only when the document forces it:

1. RoofRuler report PDFs, delivered automatically by email.
2. AppliCad XML.
3. Text-based PDF extraction.
4. NaturalForms field photos / sketches / signatures for site evidence.
5. Free / local OCR.
6. Mistral OCR 4 — only for hard image-heavy, handwritten, multilingual, or layout-sensitive documents.
7. Human review before any pricing or material truth.

Document intake flow

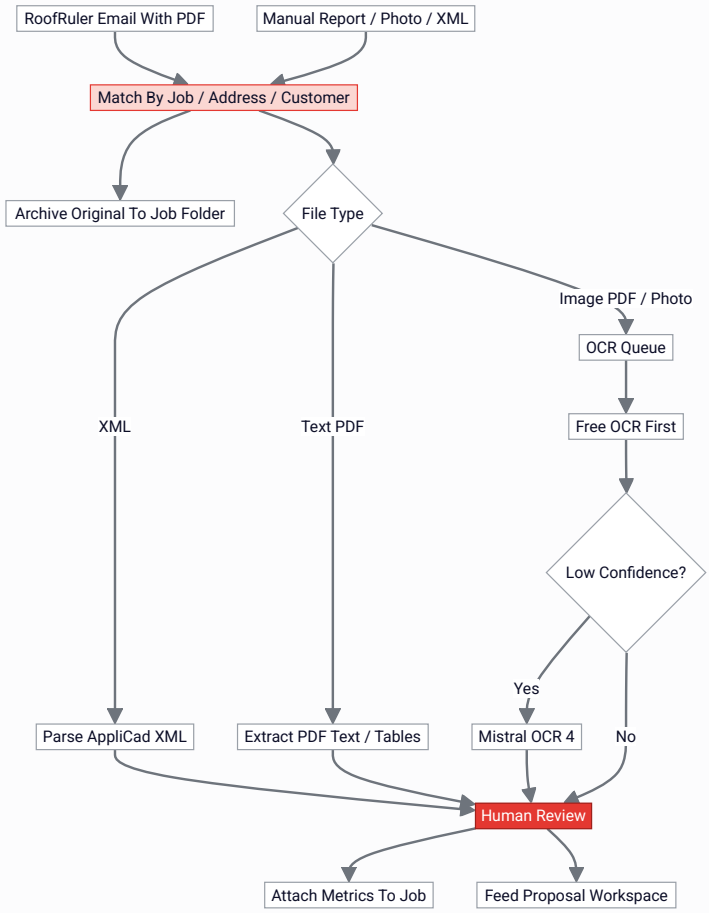

FIGURE 1 — DOCUMENT INTAKE, EMAIL / UPLOAD TO PROPOSAL WORKSPACE

RoofRuler email intake

The sample PDFs in the repo are the RoofRuler reports IronWrap receives automatically by email.

FIRST-VERSION HANDLING

1. Filter incoming RoofRuler emails by sender / subject / attachment type.
2. Save the original PDF attachment to the matching job folder.
3. Match by JobNimbus job number when present; otherwise by address and customer name.
4. If no confident match exists, drop the report into an unmatched-review queue.
5. Extract text / tables where possible.
6. Flag image-heavy or ambiguous reports for manual review.
7. Attach the report link and review status to JobNimbus.

Website-uploaded files & photos

Home, quote, contact, and service-page forms let a customer attach a file or photo. Treat those as intake evidence, not loose attachments.

- Website-uploaded files and photos are intake evidence on the lead.
- Store the uploaded files in the Google job folder once the JobNimbus job number exists — never before.
- Link the uploaded files back from JobNimbus and GHL.
- Renoworks visualizer data stays deferred unless visualizer-led selling is approved later.

Extracted measurement fields

Roof

- Roof area.
- Squares.
- Number of facets.
- Pitch.
- Eaves.
- Rakes.
- Ridges.
- Hips.
- Valleys.
- Flashing.
- Waste table, if provided.
- Waste factor, reviewed manually.

Siding

- Wall areas.
- Openings.
- Corners.
- Trim.
- Material profile.
- Waste factor, reviewed manually.

Gutter / soffit / fascia

- Gutter length.
- Downspouts.
- Soffit area / length.
- Fascia length.
- Corners / accessories.

SAMPLE ROOFRULER / APPLICAD CONFIRMATION

- RoofRuler email PDFs carry usable fields — roof area, facets, pitch, eaves, valleys, hips, ridges, rakes, flashing, squares, and waste tables.
- AppliCad XML carries structured faces, lines, pitch, size, and orientation, plus line types like gable, fascia, ridge, valley, step, and tuck-under.
- Several siding, gutter, and soffit/fascia reports are image-heavy or sparse under text extraction — so OCR and human review stay in the flow.

Confidence rules

CONFIDENCE	MEANING	ACTION
High	Structured source or clean text extraction	Staff review still required before price
Medium	OCR mostly readable, but some fields uncertain	Review task required
Low	Missing / ambiguous numbers, or image-only report	Manual review required

Proposal decision

Build a practical proposal path first:

- Customer-facing NaturalForms / HTML view.
- PDF export.
- Product options.
- Color / profile selections.
- Photos / visual links, if available.
- Deposit / payment instructions.
- Signature / acceptance path (platform decided separately).
- Financing option only after FinanceIT economics and wording are approved.
- Version history.
- Archive the PDF to the job folder.
- Update JobNimbus status.

Hold PandaDoc / DocuSign unless JobNimbus, NaturalForms, and the HTML/PDF path can't meet the acceptance criteria. NaturalForms is the first contract / signature candidate because it's already subscribed — reach for a paid platform only if it and the HTML/PDF path fail the customer workflow.

Proposal flow

Proposal acceptance criteria

A PROPOSAL IS ACCEPTABLE WHEN IT

- Opens cleanly on mobile.
- Has clear options.
- Doesn't expose internal notes.
- Has approved terms.
- Has approved deposit / payment wording.
- Has a version number.
- Saves a PDF to the job folder.
- Updates JobNimbus.
- Stops follow-up on accept / decline / complaint.

Renoworks gate

Renoworks comes in only when IronWrap commits to visualizer-led selling.

IF ACTIVE, CAPTURE

- Visualizer session link.
- Uploaded home photo or selected 3D model.
- Selected product.
- Selected color.
- Selected surface — roof, siding, etc.
- Engagement / analytics, if exportable.
- Lead contact info.
- Proposal embed / link state.

> *Renoworks data has to flow into GHL / JobNimbus — it can't stay trapped in Renoworks.*

OPEN CHECKS BEFORE PURCHASE / SETUP

- Product-library coverage for IronWrap's roof, wall, trim, and color options.
- Whether setup includes the profiles IronWrap actually sells.
- Export / API / webhook support for product, color, surface, and engagement data.
- Whether customer proposal pages can embed or link the visualizer cleanly.
- Privacy-notice requirements for uploaded customer home photos.
