QA, launch & acceptance

How each workflow is proven before it ships, the three launch stages it moves through, what "accepted" actually means, and how defects are graded.

IRONWRAP EXTERIORS • REV. JUNE 2026

QA principle

Nothing ships until a test record proves the workflow works — and a failure test proves staff can recover when it breaks.

Test matrix

TEST	EXPECTED RESULT	PASS
Website lead	GHL contact / opportunity created	☐
Home page lead	GHL contact with source URL, page type, and service intent	☐
Quote page lead	Full quote form captured with location and attachment	☐
Contact page lead	Full contact form captured into GHL	☐
Service-page lead	Hidden service field sets the correct service intent	☐
Blog / comparison CTA lead	CTA lead reaches GHL with page type preserved	☐
Google Business Profile lead	GBP call / message / click lands in GHL with a source label	☐
UTM / source attribution	utm_source / medium / campaign / content / term stored on the lead	☐
Call source tracking	Inbound call maps to the page or campaign that drove it	☐
Duplicate website lead	Existing record updated; no duplicate job / folder	☐
Website lead with file upload	Uploaded file archived to the job folder after the job number exists	☐
Website lead outside service area	Flagged out-of-area; routed to the right disposition	☐

TEST	EXPECTED RESULT	PASS
First-response tracking	First-response timestamp and time recorded from creation	☐
Manual lead	GHL + JobNimbus after qualification	☐
Duplicate lead	Existing record updated; no duplicate job / folder	☐
Phone lead	GHL conversation / contact captured	☐
Phone AI lead	AI qualifies, books, or creates a human task	☐
Phone AI follow-up	Eligible call triggers the correct follow-up sequence	☐
Existing customer call	Existing job found or human task created	☐
Complaint / escalation call	Human escalation; no review sequence	☐
Appointment booking	GHL calendar + JobNimbus task / event	☐
Cancel / reschedule	Calendar and task updated	☐
Job qualification	JobNimbus job updated and owner assigned	☐
Folder creation	One folder created after the job number exists	☐
NaturalForms submit	Completed form creates PDF / output; no duplicate job	☐
NaturalForms → JobNimbus	Completed form updates the correct job note / task / status	☐
NaturalForms archive	Output saved or linked in the correct Google job folder	☐
RoofRuler email intake	Incoming PDF matched, archived, extracted or flagged	☐
Measurement upload	Extracted, or review-needed flag	☐
Proposal sent	Customer link, PDF archive, status update	☐
Proposal accepted	Signed / accepted status and deposit workflow	☐
Contract path	Approved signing path works and archives correctly	☐
Deposit paid	QuickBooks status visible in JobNimbus	☐
Payment-method validation	Approved options display; finance-sensitive data stays out of AI / logs	☐
Material request	Task / form created and visible	☐
Material-list design	Selected format can be reviewed and used by office / shop	☐

TEST	EXPECTED RESULT	PASS
Materials ready	Job ready-to-schedule status	☐
Completion form	Job completion status and invoice / review path	☐
Invoice paid	Job close / archive path	☐
Review request	Sent only when eligible	☐
Opt-out	SMS / email stops	☐
Automation failure	Owner alert / task created	☐
API key revoked	Failure visible; no silent data loss	☐
Renoworks lead (if active)	Visualizer lead, product / color interest, model reference, and proposal link map correctly	☐

WEBSITE LEAD PASS CRITERIA

- GHL receives the lead.
- Source URL, page type, service intent, UTM / source data, and call source are preserved when available.
- A confirmation is sent.
- A qualified lead creates or updates the correct JobNimbus record.
- A duplicate lead does not create a duplicate job / folder.
- Owner / queue and next action are clear.

Launch stages

Stage 1 — Internal test

Fake / test records only.

EXIT CRITERIA

- All P0 workflows pass.
- No duplicate jobs / folders.
- Failure alerts work.

Stage 2 — Controlled real pilot

A small number of real leads / jobs, with human monitoring.

EXIT CRITERIA

- Staff can operate the workflow.
- Owner approves summaries and exceptions.
- No compliance blocker.
- No severe duplicate / data-loss issue.

Stage 3 — Production launch

Enable production workflows after final security / access hardening.

EXIT CRITERIA

- Signoff checklist complete.
- Old credentials rotated.
- Staff SOPs delivered.
- Kill switches documented.

Acceptance criteria

Task 1 is accepted when:

- All active lead sources land in GHL.
- Qualified leads reach JobNimbus.
- JobNimbus owns job number and stage.
- Folder creation is idempotent.
- NaturalForms forms submit, archive, and update JobNimbus correctly.
- RoofRuler email reports are matched, archived, and reviewed.
- Appointments work.
- Phone AI works for the approved pilot scope.
- Proposal / PDF flow works.
- Contract / signature path works.
- Measurement extraction or review flag works.
- Material-list decision is implemented and tested.
- Payment-method policy is approved and tested.
- Renoworks lead / proposal flow is tested if active.
- Deposit / invoice / review follow-up works.
- Owner exceptions view exists.
- Staff can operate without developer support.
- Compliance and access-hardening gates are complete.

Defect severity

SEVERITY	MEANING	LAUNCH IMPACT
P0	Data loss, privacy issue, duplicate production jobs / folders, wrong payments	Blocks launch
P1	Workflow can't be completed without a developer	Blocks launch
P2	Staff can work around it temporarily	Launch possible with owner approval
P3	Cosmetic / docs / minor reporting issue	Doesn't block

Rollback

For each production automation, document:

- How to disable it.
- Who disables it.
- The manual replacement step.
- What data may need cleanup.
- How to restart it.

> *No launch without rollback notes.*
