Implementation backlog

The spec pack turned into buildable work — eight epics of tasks, each with the output it produces and the bar it has to clear. Every item closes with evidence, not just a checkmark.

IRONWRAP EXTERIORS • REV. JUNE 2026

Epic 1 — Audit & containment

ID	TASK	OUTPUT	ACCEPTANCE
A1	Inventory accounts and roles	Access inventory	GHL, JobNimbus, Make, QuickBooks, storage, website, AI / phone all listed
A2	Inventory Make scenarios	Scenario map	Each scenario tagged keep / fix / pause / delete
A3	Identify live webhooks / API keys	Integration register	Owner and purpose known for each connection
A4	Create safe test records	Test-data list	Staff can tell test records from real jobs
A5	Pause dangerous duplicates	Disabled / paused list	No two automations mutate the same folder / action

Epic 2 — JobNimbus operating core

ID	TASK	OUTPUT	ACCEPTANCE
J1	Configure stages	Stage pipeline	Stages match spec and have owners / next actions
J2	Configure fields	Field set	Lead / job / material / finance fields exist
J3	Configure job-number policy	Numbering rule	JobNimbus owns the canonical job number
J4	Configure task templates	Task templates	Lead, estimate, proposal, material, completion tasks available

ID	TASK	OUTPUT	ACCEPTANCE
J5	Configure attachment categories	Categories	Docs / photos / proposals / materials / invoices organized
J6	Configure division routing	Division fields and queues	Residential, commercial, shop/supply, and steel/distribution route correctly

Epic 2B — NaturalForms field layer

ID	TASK	OUTPUT	ACCEPTANCE
NF1	Confirm plan and access	Access note	Plan, users, integrations, webhooks/output settings, and REST API availability known
NF2	Configure JobNimbus mapping	Mapping sheet	Test form updates the correct JobNimbus job / task / note
NF3	Configure Make webhook / output route	Completed-form route	Completed-form event reaches Make and logs success / failure
NF4	Build first form templates	Template set	Work order, change order, equipment, completion, inspection, materials, safety, contract, material-list drafts exist
NF5	Configure archive output	Google folder output	Completed-form output links to the right job folder
NF6	Test mobile / offline / photo / sketch / signature	Field test report	Field user can complete the form with required evidence

Epic 3 — GHL lead front door

ID	TASK	OUTPUT	ACCEPTANCE
G1	Configure lead pipeline	Pipeline	New / contacted / booked / estimate / proposal / won / lost visible
G2	Configure forms / intake	Intake forms	Website / manual / ad leads map to required fields
G3	Configure calendar	Calendar	Appointment types, buffers, confirmations work
G4	Configure SMS / email basics	Message templates	Confirmation and follow-up messages approved

ID	TASK	OUTPUT	ACCEPTANCE
G5	Configure review flow	Review sequence	Stop conditions are implemented
G6	Map website funnel sources	Source map	Home, quote, contact, service, city, blog, and GBP routes reach GHL
G7	Add attribution fields	Attribution field set	Source URL, landing page, page type, UTM, and call source captured
G8	Add qualified-lead routing rules	Routing rules	Intent routes to the correct sales / shop / escalation queue
G9	Audit Google Business Profile	GBP checklist	Categories, service areas, hours, photos, review link, and source label confirmed
G10	Define paid-lead readiness gate	Readiness gate	Attribution, response-time, dedupe, and owner-exception criteria documented
G11	Test GHL call tracking / number pools	Call-tracking test	Calls attribute to page / campaign before any paid call tool is bought

Epic 4 — Make & integration cleanup

ID	TASK	OUTPUT	ACCEPTANCE
M1	Rebuild lead handoff	GHL → JobNimbus flow	Qualified test lead creates / updates the correct job
M2	Add dedupe	Dedupe checks	Duplicate test lead does not create a duplicate job
M3	Rebuild folder flow	Folder automation	One job creates one folder after the job number exists
M4	Add failure alerts	Alert workflow	Broken test connection creates an owner-visible alert
M5	Add automation run log	Log table / Make log discipline	Critical mutations are traceable

Epic 5 — Phone AI pilot

ID	TASK	OUTPUT	ACCEPTANCE
AI1	Approve call script and notice	AI script	AI / recording / human-transfer wording approved
AI2	Build GHL Phone AI pilot	Phone AI agent	Test call qualifies and books
AI3	Configure escalation	Human transfer / task	Angry / legal / warranty / payment calls escalate
AI4	Configure summaries	Summary template	Staff can read the summary without the recording
AI5	Configure post-call follow-up	Follow-up trigger map	Eligible calls trigger the correct GHL follow-up
AI6	Run eval calls	Eval report	All required scripts pass, or fail with fixes

Epic 6 — Documents & proposal

ID	TASK	OUTPUT	ACCEPTANCE
D1	Define folder convention	Folder template	Subfolders match spec
D2	Build XML / parser path	Parser output	AppliCad XML extracted into reviewed fields
D3	Build RoofRuler email intake	Email-attachment route	RoofRuler PDFs matched, archived, and queued for extraction / review
D4	Build PDF extraction path	Extractor output	Text-PDF values extracted or flagged
D5	Add OCR fallback	OCR queue	Image-heavy docs flagged or processed
D6	Build proposal template	HTML / PDF proposal	Customer can view and the PDF archives
D7	Decide contract path	Approved signing flow	Contract archives and updates job status
D8	Decide material-list design	Approved material-list template	Office / shop can review and use the selected format

Epic 7 — Payments, reviews, exceptions

ID	TASK	OUTPUT	ACCEPTANCE
P1	Configure QuickBooks status visibility	Finance fields / status sync	Deposit / invoice status visible in JobNimbus
P2	Configure payment follow-up	Follow-up rules	Missing deposit / invoice creates a task
P3	Configure review request	Review sequence	Eligible completed jobs get a request; complaints / disputes don't
P4	Build exceptions view	Sheet / report / page	Owner sees the day's blockers
P5	Staff SOP review	SOP checklist	Staff can run the workflow without a developer
P6	Validate payment stack	Approved payment-method map	Cash/cheque/direct deposit, Interac, Moneris, credit card, and FinanceIT approved or deliberately hidden
P7	Add response-time visibility	Response-time view	First-response time for new leads / calls is visible in the owner exceptions view

Epic 8 — QA & launch

ID	TASK	OUTPUT	ACCEPTANCE
Q1	Run full test matrix	QA report	P0 / P1 tests pass
Q2	Fix launch blockers	Fix list	No P0 / P1 open
Q3	Run controlled real pilot	Pilot report	Owner approves the workflow
Q4	Final security hardening	Security checklist	Credentials rotated; MFA / roles / secrets complete
Q5	Launch signoff	Signed checklist	Owner approves production launch

Evidence standard

For every completed backlog item, record:

- Test record name / ID.
- Systems touched.

- Screenshot or exported evidence where useful.
- Pass / fail result.
- Remaining risk.
- Owner approval if production-sensitive.
